Spyridon Passas

Frontend & Game developer | Unity | React | Typescript | C#

Full-stack and tools programmer with professional experience in Unity and custom engine development. Focused on building scalable systems, user interfaces, and efficient development workflows. Experienced in agile environments with strong knowledge of modern programming principles and multiple languages. Currently complementing game development expertise with front-end web development studies at Lexicon.

IT Competence

Programming languages

- C#
- C++
- C
- Lua
- GDScript
- Javascript
- TypeScript
- HTML
- CSS
- Nix

Software & Services

- Unity
- Godot
- Figma
- Github
- Perforce
- Visual Studio Code
- JetBrains Rider
- Teams
- Discord

Other

- Scrum
- Git
- React
- NixOS

Relevant Experience

May 2025 - October 2025

Unity developer/Terna Systems, Stockholm

Contributed to the development of the user interface for Terna Systems' Machine Control mobile application, where I was tasked with developing the user interface of the app as well as tooling and back-end systems.

Specifically:

- Developed several development tools for Unity that helped reduce the overall development time of the project.
- Implemented a reactive activity bar for the application's main interface.
- Implemented a robust backend system responsible for handling critical data between various interfaces and systems.

Enviroment: C#, Unity, UI Toolkit, Github, Git, Scrum, Agile development

December 2024 - February 2025

Game Client developer/ELK Studios, Stockholm

Contributed to the integration and implementation of visual assets for casino games, where I developed the logic to correctly play animations created from fellow artists while working with other colleagues who contribute in the development of the game's backend to hook up visuals and logic.

Enviroment: Javascript, Pixiv, Scrum, Agile development

August 2023 - March 2024

Game programmer/Itatake, Remote

Contributed in the development of engine tools, user interfaces, and backend systems for the mobile game Klood Arena.

Specifically:

- Developed a localization tool that automatically updates different types of fonts in Unity.
- Contributed to the development of a backend system for managing leaderboards using Unity services such as Unity Cloud.
- Implemented a new interface for the game's competitive game mode.

Enviroment: C#, Unity, Github, Git, Unity Cloud, Scrum, Agile development

Education

April 2026 - October 2026/Ongoing

Fronddend developer / Lexicon, Stockholm

Intensive postgraduate education course with teacher-led study time of 40 hours per week. Focus on **React** and **Next.js**

HTML & CSS: Semantic HTML, Accessibility (WCAG), responsive design with CSS Grid, Flexbox and Media/Container queries. Tools: **Chromium DevTools**, **WAVE**, **Lighthouse**. Optional solutions: **Tailwind CSS**.

TypeScript: Modern functions (arrow functions, destructuring, spread/rest), DOM-manipulation, asynchronous programming (Promises, async/await, fetch API).

React & Next.js: Component management (TSX), props/params, server-/client components, dynamic and static routing, URL state management, CRUD via external API.

Agile methods: SCRUM, sprint planning, Github Projects, retrospective, stand-ups.

Ending Project: 4 weeks - standalone web application with Next.js, API-integrations, Git/Github version control and documentation.

2021 - 2024

Game developer / The Game Assembly, Stockholm

Intensive highschool education course with teacher-led study and development time of 40 hours per week. Focus on full-stack game development.

Projects: 8 game projects.

- **1st Project:** 3rd person platformer. Developed in Unity Engine in C# in 4 weeks.
- **2nd Project:** Top-down puzzler. Developed in Unity Engine in C# in 4 weeks.
- **3rd Project:** Shoot-em up sidescroller. Developed in The Game Engine in C++ in 4 weeks.
- **4th Project:** Top-down action game "Vilse". Developed in The Game Engine in C++ while using Unity Engine as a level editor in 4 weeks.
- **5th Project:** 2D-platformer. Developed in the Game Engine in C++ while using Unity Engine as a level editor in 4 weeks.
- **6th Project:** Diablo-like action game "Spite: Through the veil". Developed in a custom C++ engine while using Unity Engine as a level editor in 12 weeks.
- **7th Project:** First-person shooter "MIME//SCAPE". Developed in a custom C++ engine with an in-house level editor built in. Created an EditorAPI to be used for other editors.
- **8th Project:** 3rd-person multiplayer survival game. Developed in Unreal Engine 5 using Angelscript.

Graphics Rendering: SwapChain pipeline, Vertex and Pixel shader manipulation, Deferred rendering, Global Illumination via Raytracing.

C++: Heap vs Stack, avoiding cache misses, memory align structures, advanced collection algorithms such as Orcree, Ogreetree, and BinaryTree, advanced pathfinding algorithms such as A* in grids and meshes.

Agile methods: SCRUM, sprint planning, Trello, retrospective, stand-ups.

2018 - 2021

Bachelor Computer Science / Södertörn Universitet, Södertörn

University course with a focus on the theory behind game design, including several theoretical and practical activities.

Intrinsic vs Extrinsic Analysis: Analysis between the different two mindsets of intrinsically vs extrinsically motivated players.

Narrative & Level Design: Expanded knowledge in narrative design and level design. Landmarks, 3 Acts (Beginning, Middle, End).

Agile methods: SCRUM, sprint planning

Unity & C#: Gained fundamental skills in game programming using Unity and C#.

Version Control: Perforce/Git & Github, push, pull & locking.

Project/Other

January 2026 - Ongoing

Technical Lead - Star Bridge Protocol/Pretend Professionals, Stockholm

Currently leading a team of hobbyist programmers for a 3rd person action game using the Unity Engine as part of Valleyberg's Smarch program.

My responsibilities include:

- Documenting and structuring the project's code base, ensuring that coding standards are followed
- Organise project-related tasks for the rest of the programmers, coordinating meetings across disciplines.
- Evaluation of core systems and implementations of various features.
- DevOps related tasks, such as maintaining our communication portals and project repository and taskboard (Github).

Outside of these specific responsibilities, I am part of a larger leads group who are responsible for the overall management of the project, communicating with the other leads of the project and organising events and meetings depending on the situation.

Enviroment: C#, Unity, UI Toolkit, Github, Git, Scrum, Agile development

Februari 2026 - Ongoing

Personal NixOS Flake/Personal Project

Currently working on a personal NixOS Flake for my personal computer, where I am developing a robust and flexible flake that allows for easy customization while keeping the settings replicable across various systems.

Enviroment: Nix, NixOS, Git, Github

March 2026

Soarfall/GameJam Project

Worked on a 3 day long third person platformer using the Godot Engine. Created a basic model, rig and walk animations while designing the blockouts of the level as well as the mechanics of the player itself and the enviroment.

Enviroment: Blender, Godot, GDScript, Git, Github

August 2024

Hellish Escape/GameJam Project

Collaborated with 5 other individuals on a 3 day long project for the GMTK Game Jam 2024. The project itself is a 2d-metroidvania platformer where the core mechanic is the ability for the player to alter size, making themselves and anything they carry change in scale.

My responsibilities in this project were the creation of this main mechanic as well as the design of the game's level using the Godot Engine.

Enviroment: Godot, GDScript, Agile development, Scrum, Github, Git, Trello

August 2021

Snake 2021/GameJam Project

Collaborated with a friend to create a fun arcade project within a week using the Unity Engine. The project itself is heavily inspired by the snake game, where the twist is that the player avatar can split an infinite amount of times as well as making certain sections of the area dissappear into lethal death-traps.

My responsibility is desinging and implementing these core ideas, creating a robust snake controller that functions on any number of players on the board.

Enviroment: C#, Unity, Github, Git, Agile development, Scrum, Trello

Language

Swedish - Good verbal and written skills

English - Good verbal and written skills

Greek - Native Language
